6. How to setting the WiFi?

A. Login the camera, go to wireless LAN settings.

- В
- B-1. Go to wireless LAN settings.
- B-2. Click"Scan" twice to find the wifi signals. (Scan for more times, if find no, try to powercycle your camera.)
- B-3. choose the right SSID, in other words, the wifi signal you want to use.
- B-4. Input the wifi key, it is the password of your wifi network.
- B-5. Submit. (After submit, your camera will reboot automatically, then disconnect the cable, run the search tool "P2P ID Finder" to find out the camera IP address or refresh the webpage) .

PAY ATTENTION:

Tighten the antenna.

- 1. The key must be right (The Key only support numbers and letters, does not support the special Characters, such as: @, #, %,\$) It can be found in your router.
- 2. The distance from camera to the wireless router should be less than 20m. 4. Try to disconnect other wireless devices.

5.Change the encryption and channel WPA or WPA2,AES or TKIP.Channel should be less than 11. 802.11b/g/n mode better.

9. How to setting the alarm?

The above setting is a preparation for the alarm function, the sender should be entered the sender's email address, recipient 1、2、3、4 is filled with recipient E-mail Address; SMTP server should be filled with the sender email SMTP server, e.g. the sender email address is abc@163.com, and enter mail.163.com. Generally SMTP port is 25, do no need to change; when needs to check, just tick it, and enter SMTP user and SMTP password, both of them are provided by Email provider, and test according to reference; when needs to send, please tick Email notification Internet IP address; The e-mail server and other information can be obtained from the mail service provider the email notification is image captured when alarming if no email notification is needed when alarming, and then no need to enter.

10. How to setting Email alarm?

As shown below, there are two modes of alarm trigger, first one is motion detection, please refer to below interface, the sensitivity of motion detection can be adjusted according to the users' requirement, the higher the number is, the lower sensitivity is; Another mode is input alarm, when connected, it triggers alarm through alarm input signal which connects to linkage alarm GPIO;

When triggered, there are 3 alarm modes: one is IO alarm linkage, camera connects with linkage alarm box through GPIO, sound the siren; the second is email notification, send email with images captured; the last is upload pictures alarm, as the way mentioned before FTP upload pictures alarm, Upload pictures interval (second) keeps consistent with the mentioned upload pictures interval of Ftp service settings.

The schedule refers to arming time, as the selected time interval: 0: 00 minute per week to 0: 45 minutes and Monday 1: 00 hour and 2: 00 hour
